ROUGH IN WIRING

- 1 Excavate a 14" x 30" x 16" deep hole for the Q-VAULT direct burial housing.
- 2 Dig trenches for primary & secondary wiring to Q-VAULT housing location.
- 3 Place drain pipe at a 30 degree angle at the lowest slope of land for proper drainage. Fill bottom of pit with a minimum of 4" of gravel.

SEE DIAGRAM A

Note: Increase width to 30" x 30" when stabilizing bars are used.

1-3
DIAGRAM A

- 4 Bring all primary and secondary wiring into housing.
A: Entry location is provided at both the bottom and side of the Junction Box located on the Q-VAULT housing.

B: On the bottom of Junction Box there are: (4) 3/4" NPT and (2) 1/2" NPT KO's. SEE DIAGRAM B

C: Using the Field Drill Guide Labels provided in the installation kit you are able to drill for various fitting sizes. Only knock out openings for conduits being utilized in installation. SEE DIAGRAM C

- 5 After all field wiring has been installed with proper lead lengths, tighten all fittings properly to assure they are water proof. All drilled entries require Q Click wire connectors to insure water tight connection. Use of other connectors voids warranty.

- 6 Coil and store field wiring in Junction Box area.

Note: Label all wiring for future reference.

For wet Location luminaires UL 2108 covers luminaires with up to 30 volt input provided they are Class I wired per NEC Chapter 3. For wet Location luminaires with inputs not exceeding 15 volts, UL 1838 applies. Note: NEC Article 411 + Annex A = UL 2108. Low Voltage Luminaire Primarily for Dry and Damp Locations | | | | | | | | | |
| Obsolete for LV Remote Dry, Damp & Wet | | | | | UL 1598 - Luminaires: 30V AC / 30V DC Max Output at Power Supply - No load This UL Standard applies to line voltage luminaires for use in non- hazardous locations and allows up to 600 volts input and all wiring must be Class 1 per NEC Chapter 3. Low Voltage luminaires powered by remote transformer are NOT covered by this standard. | | | | | | | | | |
| | | | | | This Listing does not cover: • LV Landscape Lighting products and Submersible Luminaires installed in the United States at 15V or less. (UL 1838 is the Standard per NEC-Annex A) • Swimming Pool & Spa Luminaires (UL Pool & Spa is the Standard per NEC Article 680) • Low Voltage Lighting Systems powered by remote transformers (UL 2108 is the Standard per NEC 411 + Annex A) Note: NEC Article 410 Intended for Line Voltage Luminaires for Dry, Damp and Wet Locations | | | | | | | | | |
| | | | | | UL 506-General Purpose or Specialty Transformers: 600V Max This UL Standard is a transformer standard only and is not a complimentary component to any luminaire standard. UL 1838, Pool & Spa and 2108 does not permit the use of UL 506 transformers unless the transformer is additionally tested and subsequently listed to UL 1838, Pool & Spa or 2108. A UL-506 transformer may be tested as an internal components to a UL-1598 luminaire, to be an integral transformer. The Scope of UL-506 (Section 1.2) specifically excludes use in Landscape Lighting Systems and for use in Pool & Spa Lighting Systems. Additionally, a Cord and Plug connection is not permitted. In no instance can a UL-506 transformer be used in Landscape or Pool & Spa Lighting. A UL 1838, UL Pool Spa and UL 2108 Power Supply may power a UL-1598 luminaire that was listed prior to the UL-2108 effective date since these Luminaires are required to be Class 1 wired per NEC Chapter 3. Cable | Exceeds Standard | Complimentary Component | The UL limit of 15 volts AC at the Power Supply under no load (Open Circuit) was established for life safety due to shock potential in wet conditions. The Standard also requires a grounded isolation barrier between the primary and secondary windings. In the Pool & Spa Standard the primary must be 120V & the connection must be in a separate junction box or compartment. | | | | | | | | |
